COMPUTER SCIENCE

- Python, Django, and Django REST Framework | *Advanced*
- JavaScript, TypeScript, HTML, and CSS | *Advanced*
- React, Tailwind, Axios, Zod, React Hook Form, and React Router | *Advanced*
- Docker and Docker Compose | *Advanced*
- Linux Ubuntu and Bash | *Advanced*
- Git | *Advanced*
- Visual Studio Code and Cursor | *Advanced*
- Vite and Pipenv | *Advanced*
- Rclone | *Advanced*
- PostgreSQL and PostGIS | *Intermediate*
- Nginx and Unicorn | *Intermediate*
- Simple JWT and Google OAuth 2 | *Intermediate*
- Zustand and Redux | *Basic*
- DRF Spectacular | *Basic*
- GeoServer, OpenLayers, and GeoJSON | *Basic*

LANGUAGES

- Spanish | native level
- English | B2 level
- Italian | A1 level

SKILLS

- Problem-solving.
- Critical thinking
- Independence at work
- Focus on processes and procedures
- Adaptability

PERFIL PROFESIONAL

Full-Stack Developer specializing in backend development, with experience in the design, development, testing, deployment, and maintenance of Dockerized web applications, RESTful APIs, and databases. Advanced knowledge of Python, Django, React, TypeScript, Docker, and Linux, along with experience in security using JWT, data synchronization, and geospatial tools. Seeking remote positions in Italy related to backend development, API design, and data management, within teams that promote technical learning, agile methodologies, and process documentation.

WORK EXPERIENCE

Full-Stack Developer | Ministry of Infrastructure of the Province of Buenos Aires (2022 – present)

- Design, development, testing, and maintenance of a web portal for the management and administration of environmental projects, using front-end, back-end, database, and related technologies.
- Development and maintenance of RESTful APIs using Python, Django, and the Django REST Framework, including JWT authentication, granular user permissions, and endpoint documentation.
- Gradual migration of data and documentation from Google Drive to our own infrastructure, ensuring its organization, integrity, availability, and redundancy.
- Implementation of bidirectional synchronization processes between local servers and Google Drive using Rclone and Google Service Accounts.
- Replacement of Trello as the project tracking system with a custom web application tailored to the department's operational needs.
- Design and maintenance of interfaces and components in React, Tailwind CSS, and TypeScript, including forms, hooks, validation schemas with Zod, and state management.
- Design, development, testing, maintenance, and management of Docker containers and microservice architectures using Docker Compose.
- Management of static and dynamic files using WhiteNoise and MinIO, including the configuration of storage services for web applications.
- Administration, deployment, migration, and backup of PostgreSQL and PostGIS databases.
- Requirements gathering, diagnosis, evaluation, prioritization, and scope definition in collaboration with non-specialized teams, translating functional needs into user stories and technical specifications.
- Design of standardized nomenclatures for the classification, organization, and retrieval of environmental projects.
- Defining work methodologies for using the portal and efficiently managing workspaces in GeoServer.
- Collaborating with a GIS team specializing in the management of geospatial information related to the environmental impact of projects.
- Preparing technical documentation, application logs, user procedures, and guidelines for information management.
- Applying agile methodologies to organize, plan, and monitor development phases.

ACADEMIC BACKGROUND

- Computer Engineering | National University of La Plata (on hiatus)
- Electromechanical Technician | Technical School No. 2 in 9 de Julio (completed)
